ORICHROME (Chromic catgut) is an absorbable, sterile surgical suture composed of purified connective tissue (mostly collagen) Derived from the sub mucosal fibrous layer of healthy sheep intestines.

ORIGUT (Plain Catgut) is a fast absorbing surgical gut suture made from strand of collagenous material prepared from the sub mucosal layers of the small intestine of healthy sheep.

ORYL910 (Polyglactin 910) suture is most widely used braided and coated synthetic absorbable suture in the world. Polyglactin 910 sutures is a synthetic absorbable sterile suture composed of a copolymer made from 90% Glycolide and 10% L-Lactide.

ORYL (Polyglycolic Acid) is an ideal and time tested synthetic absorbable suture, widely used by surgeons. PGA's superior features over catgut are predictable absorption, outstanding tensile strength and excellent handling properties.

DURASIL (Black Braided Silk Suture) is a non absorbable, sterile, surgical suture composed of an organic protein called fibroin.

ORLON (Nylon/Polyamide Suture) is non absorbable, sterile surgical monofilament suture composed of the long-chain aliphatic polymers Nylon 6 and Nylon 6.6.
